

# Introducing a More Secure Way To Pay

## EMV Chipped VISA<sup>®</sup> Credit Cards **are Here!**

Experience a more secure way to pay with our EMV Chipped VISA<sup>®</sup> Credit Cards. EMV Credit Cards have an embedded microchip in them that stores the data and information on your card.

Instead of swiping your card to pay, you will now insert your card into a terminal slot and wait for it to process. If a chip-friendly reader is not available, you can swipe your card as you always have.
